

Letter of Recommendation ? Dana Levy

From: Dr. Alon Kaufman, VP of Security Research at CyberArk

To Whom It May Concern,

I am writing to recommend Dana Levy, who has been a key member of my security research team at CyberArk for the past four years. Dana joined us as a security engineer and quickly distinguished herself through exceptional technical depth and leadership ability.

Dana's most impactful contribution has been the design and implementation of our zero-trust network architecture framework. She led a team of 4 engineers to build a SPIFFE/SPIRE-based identity system that reduced our lateral movement attack surface by 60%. This project demonstrated her ability to combine deep security knowledge with practical engineering excellence.

Her work on the automated threat intelligence platform has been equally impressive. Dana architected a system that ingests over 500,000 indicators of compromise daily, dramatically improving our threat detection capabilities. She also built our internal red team automation framework, which has been used in 20+ enterprise client engagements.

Beyond her technical skills, Dana is an outstanding mentor and team leader. She has grown our red team from 2 to 4 engineers, established code review practices, and created training programs that elevated the entire team's capabilities. Her communication skills make complex security concepts accessible to both technical and executive audiences.

I recommend Dana without reservation for a principal security engineering role. She combines rare offensive security expertise with the architectural thinking needed to build defense-in-depth systems at scale.

Sincerely,

Dr. Alon Kaufman
