

Tal Ben-David ? Curriculum Vitae

#Personal Information

- Full Name: Tal Ben-David

#Summary

Staff Backend Engineer with 7 years of experience designing distributed systems and event-driven architectures at scale. Specialized in high-throughput data pipelines, microservices, and platform reliability. Proven track record of building systems processing 100B+ daily events with sub-millisecond latency requirements.

#Work Experience

##Staff Backend Engineer ? AppsFlyer

March 2020 ? Present | Herzliya, Israel

September 2018 ? February 2020 | Ra'anana, Israel

#Education

##Master of Science in Computer Science ? Tel Aviv University

2016 ? 2018 | GPA: 90/100

#Technical Skills

Programming Languages: Java, Scala, Kotlin, Go, Python, Clojure

#Projects

##Real-Time Event Enrichment Pipeline (AppsFlyer)

Built a streaming pipeline processing 1.2M events/second for mobile attribution enrichment. Uses Kafka for ingestion, Flink for stateful processing, and ClickHouse for analytics. Technologies: Java, Kafka, Flink, ClickHouse, Kubernetes.

Designed active-active deployment across 3 AWS regions achieving 99.99% uptime. Includes conflict-free replicated data types (CRDTs) for state synchronization and intelligent routing. Technologies: Go, Kafka, Redis, AWS.

Led decomposition of monolithic Clojure application into 40+ microservices with saga-based transactions, API gateway, and service mesh. Reduced deployment cycle from 2 weeks to 2 hours. Technologies: Kotlin, gRPC, Istio, Kubernetes.

Created an open-source Kafka consumer framework for Java/Kotlin with built-in retry, dead-letter queues, and backpressure handling. 250+ stars on GitHub. Technologies: Kotlin, Kafka.

Designed a Raft variant optimized for cross-datacenter replication reducing commit latency by 40%. Implemented prototype in Go and evaluated across 5 simulated datacenters. Published at ACM SOSP Workshop.

#Certifications

1. AWS Certified Solutions Architect ? Associate (April 2021, Amazon Web Services)

#Languages

- Hebrew: Native

#Interests

- Contributing to Apache Kafka and Flink communities
